

Table of Contents	i	3.2.1 Specimen Illumination	37	4.3.3 Insight into Processing Time Optimisation	102
List of Figures	iv	3.2.2 Image Acquisition Protocol	38	4.3.4 Irradiation Capacity	103
List of Tables	viii	3.3 MATLAB as Software Platform	40	4.3.5 Cell Detection-Tracking Timing	104
Nomenclature	x	3.4 Cell Detection in Bright-field Images	44	Chapter 5 – Discussion	108
Chapter 1 – Introduction	1	3.4.1 Testing of Existing Algorithms for Cell Detection	44	5.1 Overview of Project	108
1.1 Clinical Rationale and Background of Current Project	1	3.4.2 Design of a New Cell Detection Algorithm	45	5.2 Limitations and Recommendations for Future Work	114
1.2 Underlying Biology and Radiobiology Principles	4	3.4.2.1 Selection of suitable focal plane	46	Chapter 6 – Concluding Remarks	115
1.2.1 Cell Biology	4	3.4.2.2 Unsharp mask filter application	50	References	116
1.2.2 Radiobiology Principles	6	3.4.2.3 Image corner detection	50	Appendix A – Mathematical Background	130
1.2.2.1 Radiobiological phenomena	6	3.4.2.4 Corner clustering	53	A.1 Focus Estimation Algorithms	130
1.2.2.2 Clonogenic survival assay	8	3.4.2.5 Outlier cluster elimination	57	A.2 Harris Corner Detection	130
1.3 Charged Particle Microbeams	10	3.4.2.6 Centroid definition for cell targeting	59	Appendix B – Image Focus Estimation Results	132
1.3.1 Charged Particle Microbeams	10	3.4.3 Cell Detection Evaluation	60	Appendix C – Sensitivity-Robustness Analysis Results	133
1.3.2 Research Questions Addressed with Microbeams	13	3.4.4 Separation of Touching Cells	62		
1.3.3 Limitations of Microbeams	14	3.4.5 Calculation of Irradiation Time	63		
1.4 The Wolfson Surrey Vertical Microbeam	15	3.5 Cell Tracking in Time-Lapse Microscopy	64		
1.4.1 Irradiation System	15	3.5.1 Unsuccessful Cell Tracking Trials	65		
1.4.2 The End-Station Microscopy Facility	17	3.5.2 Principles of Cell Tracking Method	65		
1.4.2.1 Configuration of the end-station microscopy facility	17	3.5.2.1 Choice of method	65		
1.4.2.2 Imaging at the end-station microscopy facility	19	3.5.2.2 Cell position generation for disappearing cells	67		
1.5 Digital Microscopy and Image Processing	21	3.5.2.3 Cell division detection	68		
1.6 Project Objectives and Overview	23	3.5.2.4 Measurement of cell migration and division	69		
Chapter 2 – Literature Review	25	3.5.2.5 Option for on-line or off-line tracking	70		
2.1 Focus Assessment in Bright-Field Microscopy	25	3.5.3 Assessment of Cell Tracking Module as Pilot Study	70		
2.2 Cell Detection in Bright-Field Microscopy	27	3.5.4 Calculation of Tracking Time	72		
2.3 Cell Tracking	29	3.6 Use of GPU Capacity	73		
2.3.1 Cell Association	29	3.7 Integration to Microscope Software and GUI	75		
2.3.2 Cell Division Detection	32	3.8 Use of a Secondary Microscopy Facility for Project Development	78		
2.4 Overview of Commercial Software Packages	33	Chapter 4 – Results	81		
Chapter 3 – Materials and Methods	35	4.1 Cell Detection Results	81		
3.1 Cell Dish Preparation	35	4.1.1 Detection of V79 Cells	81		
3.2 Cell Imaging	37	4.1.2 Detection of other Cell Types	87		
		4.1.3 Detection of U251 Cells	90		
		4.2 Cell Tracking Results	92		
		4.2.1 Tracking of V79 Cells	92		
		4.2.2 Tracking of U251 Cells	94		
		4.2.3 Tracking of MCF7 Cells	98		
		4.3 Application Timing	100		
		4.3.1 Timing of Focal Plane Selection	100		
		4.3.2 Cell Detection Timing	101
